Extra Help: By Appointment

Welcome to chemistry class! Chemistry is the branch of science that is concerned with matter and the changes it undergoes. I look forward to an exciting year of learning and hope that I can assist you in attaining the highest grade possible in this class.

What you can expect from me

I will make every effort to

- Come to class every day with a lesson prepared
- Be fair and consistent in how I deal with all students
- Return graded assignments in a timely manner
- Explain the course material as clearly as possible

My goals for this course:

- I want every student to come to class every day
- I want every student to understand the material and, if possible, enjoy class
- I want every student to make an "A" or "B"
- I want every student to feel prepared to take college-level chemistry after completing this course.

What I expect from you

I expect you to make every effort to

- Come to class every day on time
- Prepare for chemistry outside of class by doing the assigned homework
- Push yourself to learn as much as possible

What you can expect from this course

Most of you have, at a minimum, already taken (or are taking) Biology and Geometry. Some people find chemistry to be more difficult than biology because chemistry requires a lot more problem-solving than biology does. However, some people find that chemistry is a lot easier for this same reason. Expect a lot less vocabulary and memorization than in biology, and expect a lot more mathematical problems. If you have taken algebra, you have more than enough math for 95% of this course. The math in chemistry is not hard; it is very low-level arithmetic for the most part. However, even though the math in this class is generally easy, there is a lot of it.

Grading scheme

Your class average in chemistry will be determined as follows:

**Your Grade:
40% Quiz Average
40% Test Average
20% Lab Average**

On average, there will be one or two quizzes and one lab per week. There will be a test roughly every other week.

Grading Scale:

- A: 90 – 100%
- B: 80 – 89%
- C: 70 – 79%
- D: 60– 69%
- F: Below 60%

Make-up work and other grading policies

- **Homework** is not usually collected. (The quizzes come right from the HW, so it's usually pretty obvious whether or not you understood the previous night's assigned problems.) You are expected to do the HW on your own, whether or not you are here. You are responsible for any changes in the HW assignments that were announced while you were gone.
- **Labs** that are missed due to an absence of any kind cannot be made up. Unexcused absences will therefore result in a grade of zero. Excused absences will be "omit" grades that neither help nor hurt the student's class average. (Missing labs for any reason will put you at a great disadvantage in preparing for tests.) If you are absent on the due date of a lab report, make sure that you turn it in as soon as you get back! I will not remember that you were not here to turn it in!
- **Quizzes** that are missed cannot be made up after I have handed back the graded assignment to the rest of the class. Excused and unexcused absences (and tardies) will result in a grade of zero. The lowest two quizzes will be dropped for all students at the end of each term. (Only quizzes can be dropped – tests and labs are never dropped.) Thus, a student who has missed two quizzes can still theoretically achieve a quiz average of 100%. Obviously, students who come to class have a big advantage over students who miss class and/or who are frequently tardy to class.
- **Tests:** If you miss a test, you will need to make it up as soon as possible after you return. Obviously, it is your responsibility to set up a time with me to take the make-up test. (I will probably not remember that you missed it.)
- There will not be any "extra" projects or papers assigned this semester. We have plenty to do without them, believe me!

Good luck! ☺
